DETAILED ACTION

This office action is in response to the amendment filed the 11 September 2006.
 Claims 1-16 are pending.

Response to Arguments

2. Applicant's arguments filed the 11 September 2006 have been fully considered but they are not persuasive.

On page 6, 4th paragraph of the amendment the applicant argues the rejection of claims 1-16 under 35 U.S.C. § 112, first paragraph, in that the specification is enabling. On page 7, 2nd paragraph the applicant argues that in the present case, one of ordinary skill in the art would not need "undue experimentation" to make and use the invention, and that the concept of using offsets, although novel and non-obvious in the present application, permeates to the field of electronics, and thus no "undue experimentation" would be necessary to make and use the invention. The examiner respectfully disagrees.

In the applicant's explanation in the last paragraph of page 6, the applicant provides an example of how the offset current could be measured as water pressure changes. If this explanation would have been provided in the specification at the time of filing, understanding how the applicant was computing the offset current would have been better understood, however, since the explanation is not in the specification it

Art Unit: 2629

would raise new matter issues if incorporated. Also this explanation still does not help explain how the GAP IS EQUALIZED by the auto-equalizing device. Therefore, claims 1-16 do not enable "one of ordinary skill" in the art to make or use the claimed invention.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 4. Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1 recites the limitation "an equalizing device disposed in the water tight main body," however, there is insufficient explanation in the specification to enable one skilled in the art to make and/or use the invention. The closest support in the specification for this limitation occurs in paragraph [0021] located on page 6 of the specification where it is recited that: "The auto-equalizing device 50 is implemented by hardware and/or software and works by comparing the voltage gradient against the pressure gradient reported by the pressure sensor, and an offset current relative to the depth is computed. The offset current is updated as the depth changes. Accordingly,

Application/Control Number: 10/718,736 Page 4

Art Unit: 2629

writing is detected with reference to the offset current and the writing pad 20 is able to work underwater even as the water pressure varies." This explanation is insufficient in that it does not allow one of ordinary skill in the art to ascertain how updating the offset current as the depth changes allows the auto-equalizing device to equalize the pressure in the gap. Furthermore the specification states that "The auto-equalizing device 50 is implemented by hardware and/or software and works by comparing the voltage gradient against the pressure gradient reported by the pressure sensor," however, it is not explained how the auto-equalizing device would receive the pressure gradient from the pressure sensor and how comparing the voltage gradient to the pressure gradient results in a computed offset current.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 10/718,736 Page 5

Art Unit: 2629

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen G. Sherman whose telephone number is (571) 272-2941. The examiner can normally be reached on M-F, 8:00 a.m. - 4:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amr Awad can be reached on (571) 272-7764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
